

TEKKUZEN - Privacy Policy

1. Data Collection

We collect faculty-uploaded documents and student-submitted queries. This data is essential for the Retrieval-Augmented Generation (RAG) pipeline.

2. Technical Processing

Documents are parsed using OpenCV and LangChain. Embeddings are generated and processed via the Groq API. Vector data is stored in ChromaDB.

3. Anonymization

Our system includes an Anonymization & Logging Service. Student queries are stripped of personal identifiers before being stored in MongoDB for faculty analytics.

4. Third-Party Services

Processing is assisted by the Groq API and MongoDB. No data is used for training external models.
